CODE BOT

A bot-building hackathon on the generals.bot competition ruleset

Build your strategy.
Let your code fight.

20h build / solo entries / 1v1 matches

2 OCT 2026 · 6:00 PM IST · H 205

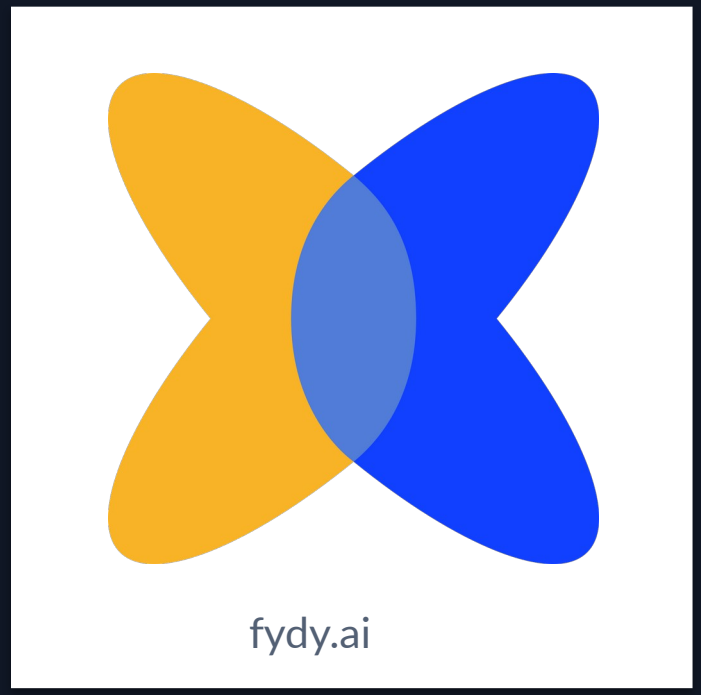

SCHEMATIC MAP

Organized by Fuzzy Dynamics • Presented by Animish Sharma

What is Fuzzy Dynamics (FYDY)

The organizers of Code Bot

An AI research company working on machine cognition.

FYDY is short for Fuzzy Dynamics.

Its focus: AI systems that learn from experience.

About FYDY

From machine cognition research to tools for scientific discovery

Fuzzy Dynamics

fydy.ai

Building AI that learns from experience.

AI RESEARCH

Machine cognition, spanning reinforcement learning, world models, robotics and neuroscience.

OPENSCIENTIST

An AI research studio for planning, reading and running experiments — currently in private beta.

Turn a strategy into a competitor.

Individual participation. One Python file. Every official move made by code.

01

Build

Create an autonomous agent during the 20-hour window.

02

Test

Challenge the starter and your own variants. Learn from failures.

03

Battle

Submit once. Compete in the league, then the finals.

Protect your general. Find theirs.

Competition mechanics overview • full semantics: generals.bot/rules

EXPAND

Claim territory

Navigate a grid, gather armies and plan around mountains.

SCOUT

Reason through fog

Use observations and memory to decide where to attack.

CAPTURE

Finish the game

Capture the opposing general while defending your own.

The endgame rewards action.

Use the event’s pinned competition package for all testing.

Castle economy	Build castles; there are no neutral castles at the start.
Turn 800	Deathtouch activates: an executed touch on the enemy general wins.
Turn 1200	No capture means a draw. Territory does not break the tie.
Learn the details	Check castle costs, movement priority and visibility in the rulebook.

Your 20-hour build plan

Kickoff: 2 Oct, 6:00 PM IST • Deadline: 3 Oct, 2:00 PM IST

H00–H02 • Connect Run the starter. Read observations. Produce valid actions.

H02–H08 • Build Add expansion, defense, scouting and a first attack policy.

H08–H16 • Improve Run batches, inspect losses and compare strategy changes.

H16–H20 • Submit Stabilize, smoke-test, upload and verify the receipt.

H20 = HARD FREEZE • validation and tournament follow

Get one full match working early.

The organizer starter kit is the source of truth for setup.

01

Install the kit

Download our evaluator and starter.py. Use Python 3.12 and the standard library.

02

Make a move

Implement act(observation). Return five integers describing one action.

03

Run a match

Run the evaluator against pass_bot.py, then stronger opponents.

Start simple. Measure every change.

A dependable heuristic is a useful starting point.

DEFEND

Keep a safety margin

Recognize threats early and route reinforcements home.

EXPLORE

Make scouting useful

Remember terrain and identify routes that expose the enemy.

PRESSURE

Commit with intent

Choose between growth, castle investment and a decisive attack.

Build independently. Compete fairly.

Event policy • individual registration locks at kickoff

Individual entries	Compete solo. One official bot per participant.
AI tools allowed	Disclose material AI assistance; understand the code you submit.
Reuse with attribution	Use the standard library and our starter. Build your strategy during the event.
Autonomous play	No human steering, external calls, collusion or hidden-state access.

Freeze the bot. Prove it runs.

Submit to [SUBMISSION LINK] before T0 + 20:00.

ONE FILE

participant_id.py

UTF-8 Python source, up to 1 MiB. No ZIP, extra files or downloads.

ONE FUNCTION

act(observation)

Return [kind, row, col, direction, split]. Include attribution in the file header.

ONE DEADLINE

Receipt + checksum

Upload by H20. We freeze and checksum the latest complete on-time file.

Reliability is part of the competition.

We run your bot offline, on one CPU, with the same limits for everyone.

150 ms	10 s	1 CPU	2 GiB
per ordinary reply	first reply	shared, alternating turns	memory per bot

Python 3.12 + standard library. No network, GPU or extra packages.

Timeout, crash or malformed return = game forfeit. See rules §5.

League first. Knockouts next.

Every league pairing plays twice on fresh maps, with starting slots exchanged.

LEAGUE

Everyone plays

Game points: win 1, draw ½, loss 0. Top four advance.

SEMIFINALS

1 vs 4 · 2 vs 3

Four games per series; each bot starts in each slot twice.

MEDALS

Final + third place

Six games for the title; four games for the bronze playoff.

Make every result count.

Tournament points are separate from in-game army or territory.

League ties	Head-to-head points → total wins → published seeded draw.
Series ties	One extra two-game pair → higher league seed if still tied.
Bot failure	Timeout, crash, exception or malformed return forfeits the game.
Infrastructure failure	Organizers review logs and replay only affected games.

Win through strategy.

Treat participants, volunteers and shared infrastructure with respect.

No tampering	Do not modify the runner, probe other bots or bypass fog of war.
No coordination	No match fixing, intentional favors or cross-participant strategy sharing.
Report privately	Send result disputes within 10 minutes of publication.
Evidence decides	Officials review replay, logs and submitted artifacts; decisions are recorded.

Five checks for a battle-ready bot

Leave time to upload before the deadline.

01 Launch — Imports cleanly and exposes act(observation) in the event image.

02 Finish — Completes local games without crashes or blocked output.

03 Measure — Fits response time, memory and the 1 MiB file limit.

04 Disclose — Header comments list sources and material AI assistance.

05 CONFIRM • correct file + correct entry + successful receipt

US$1,000 in prizes

Results decide the podium. Every prize goes to an individual participant.

$500

FIRST PLACE

Win the six-game championship final.

$300

SECOND PLACE

Reach the championship final.

$200

THIRD PLACE

Win the four-game third-place playoff.

20 hours to turn an idea into a rival.

Venue: H 205 • Build. Test. Submit. Compete.

KICKOFF 2 OCT 2026 · 6:00 PM IST

DEADLINE 3 OCT 2026 · 2:00 PM IST

[REGISTRATION LINK] / [HELP CHANNEL]

1st $500 / 2nd $300 / 3rd $200 · USD

Organized by Fuzzy Dynamics • Presented by Animish Sharma

We take it from here.

Your frozen file competes unchanged throughout the tournament.

Validate	We check your file, API and ability to finish a test match.
Freeze	We record the file checksum and the evaluator version.
Compete	We run the league, semifinals, third-place playoff and final.
Publish	We announce standings, match results and the three prize winners.

Read the rules. Use the pinned kit.

Event rules v2.0 • single-file Python submissions • organizer-run evaluation
